IN CONJUNCTION WITH CORL 2026

Human-Centered Robot Learning and Interaction

HumanRLI 2026

Toward Reliable and Scalable Autonomy in Human Environments

November 12, 2026 **2:00–6:00 PM CST** **Room 202, JW Marriott Austin**

Robot learning has made rapid progress on dexterous manipulation, locomotion, navigation, and increasingly general vision-language-action models. Yet real-world deployment means operating **in human environments and around humans** — homes, hospitals, offices, warehouses, public spaces — where people are not only end-users but also **collaborators, supervisors, demonstrators, and bystanders**. This workshop asks how we translate lab-scale demonstrations into systems **reliable enough to be trusted** and **scalable enough to deploy** across diverse users, tasks, and settings.

Call for Papers — Representative Topics

1. **Learning from Human Data**
   Scalable interaction data · demonstrations, corrections, preferences · continual learning from feedback · privacy, consent, effort
2. **Human-Aware Foundation Models**
   Grounding VLA models in contact and social norms · human attention, intent, mental states · personalization and preference alignment
3. **Reliability, Safety, Evaluation**
   Benchmarks beyond task success · robustness to clutter, interruptions, novice users · failure detection, recovery, graceful handover
4. **Long-Horizon Interaction**
   Turn-taking, intent inference, interaction repair · multi-session memory · field studies in homes, hospitals, warehouses

Important Dates

Submissions Open	Sep 16, 2026
Deadline	Oct 12, 2026
Notification	Nov 5, 2026
Camera Ready	Nov 10, 2026
Workshop Day	Nov 12, 2026

JW Marriott · Room 202 · 2:00–6:00 PM CST

Deadlines and notification at 11:59 PM Anywhere on Earth (AoE)

Invited Speakers

Harold Soh
NUS
Trust-aware HRI; tactile perception; learning from feedback

Andreea Bobu
MIT
Representations of human intent; preference alignment

Jakob Thumm
Stanford University
Provably safe human-robot collaboration; personalization

Masha Itkina
Toyota Research Institute
Trustworthy learning under uncertainty; robot evaluation

Program — Nov 12, 2:00–6:00 PM CST

2:00	Opening remarks — 5 min
2:05	Invited talk 1
2:35	Invited talk 2
3:05	Invited talk 3
3:35	Invited talk 4
4:05	Panel discussion — all invited speakers
4:35	Contributed spotlight talks
4:55	Awards & closing synthesis
5:05	Poster & live-demo session
